DETAILED ACTION

Election/Restrictions

1. Claims 10-22 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected method, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 10/21/05.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kagotani et al. (US 5419938).

Kagotani et al. disclose a magnetic recording medium comprising a magnetic layer containing nanoparticles formed from ferrite powder, containing a material selected from a group including Co and Ni, dispersed in an organic binder. The easy axis of magnetization of the particles is perpendicular to the substrate plane or parallel to the substrate plane. The reference teaches that the magnetic particles have a preferred particle diameter of up to 0.15 microns with a suitable value of as low as 0.02 micron described in the specification (see abstract; col. 4, lines 39-46 and col. 4, line 56 to col. 5, line 4). It would have been obvious to one of ordinary skill in

the art at the time of invention to choose a suitable particle size value of 20 nm from within the disclosed range in view of the apparent functional equivalence of all values within the broader range of up to 0.15 microns.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Truong et al. (US 6136428) is cited as art of interest.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Holly Rickman whose telephone number is (571) 272-1514. The examiner can normally be reached on Monday-Friday 9:30-6:00.
